the EDGE®

Concrete Estimating Software

The EDGE® is takeoff and estimating software built for concrete. Easily perform on-screen measurements and access trade-specific assemblies to create bids that reflect your jobs.

The Features You Need to Bid Concrete Projects:

All-in-one estimating and takeoff:
Count and measure within one system that provides real-time updates to reduce errors and delays.

Concrete-specific assemblies:
Easily review costs for concrete mixes, costs for reinforcement materials, like rebar, and costs for formwork materials such as plywood.

Automated calculations:
Easily determine project-specific information like concrete volume, reinforcement calculations, equipment and labor costs.

Smart Labor® Technology:
Adjust labor rates in real time based on task complexity, such as placing rebar or pouring concrete.

Custom Layout:
Set up and easily adjust common conditions with precise depth and width measurements for slab on grade, elevated slab, walls, wall footings, column footings, stairs and more.

Benefits of The EDGE's Concrete Estimating Software

- Build accurate concrete estimates using cloud-based data
- Be confident in your concrete supplier pricing with Vendor Quote
- Keep your team on the same page with uniform conditions
- Get access to a team of responsive experts

Win More Concrete Projects With The EDGE!
